Question 1
Fill in the blank: A key distinction between cloud and traditional network hardening is the use of a server baseline image, which enables security analysts to prevent _____ by comparing data in cloud servers to the baseline image. 1 / 1 point

slow speeds
improper resource storage
damaged data
unverified changes
Correct
A key distinction between cloud and traditional network hardening is the use of a server baseline image, which enables security analysts to prevent unverified changes by comparing data in cloud servers to the baseline image.

Question 2
Data and applications on cloud networks do not need to be separated based on their service category, such as their age or internal functionality. 1 / 1 point
True
False
Correct
Similar to OS hardening, data and applications on a cloud network should be kept separate depending on their service category. For example, older applications should be kept separate from new applications. And software that deals with internal functions should be kept separate from front-end applications seen by users.

Question 3
Who is responsible for ensuring the safety of cloud networks? Select all that apply. 1 / 1 point

Cloud service provider
Correct
Individual users
Correct
Research department
Security team
Correct

Question 4
Fill in the blank: _____ cloud services are a common source of cloud security issues. 1 / 1 point

Misconfigured
Unauthorized
Shared
Managed
Correct
Misconfigured cloud services are a common source of cloud security issues.
